

## Claims

- [c1] A plant stand, comprising:  
 at least one vertical support communicating in a removable manner with the earth;  
 a bend on said at least one vertical support so that the user may apply pressure with their foot to insert said at least one support into the ground;  
 at least one indentation in said at least one vertical support, that has a hook mechanism, for attaching a ring; and  
 at least one ring attached to said at least one vertical support.
- [c2] A plant stand as in claim 1, further comprising at least three additional rings of increasing sizes from said at least one ring attached to said at least one vertical support.
- [c3] A plant stand, as in claim 2, further comprising at least three additional hook mechanisms for attaching said at least three additional rings to said at least one vertical support.
- [c4] A plant stand as in claim 3, further comprising at least three additional vertical supports.
- [c5] A plant stand as in claim 4, wherein said at three additional vertical supports has at least four teeth mechanisms evenly placed, to removably communicate with said at least one ring, and said at least three additional rings.
- [c6] A plant stand as in claim 5, wherein said at least three additional vertical supports have at least one bend each so that the user may apply pressure with their foot to embed said at least one bend each into the earth.
- [c7] A plant stand as in claim 6, wherein said at least one bend each is identical in construction to said bend on said at least one vertical support.
- [c8] A plant stand as in claim 5, wherein said at least one ring and said at least three rings are arranged on said at least one vertical support and said at least three additional vertical supports in a horizontal manner with the smallest ring closest to the earth, and the largest ring farthest from the earth.
